

Transverse roof rack

565 071 151

ŠKODA KODIAQ

Material: Steel + plastic + anodised aluminium

Quality | Reliability | Durability | Testing

The transverse roof rack is a **practical accessory** for any ŠKODA KODIAQ vehicle. On account of their quality, proven reliability and ease of use, they are justifiably considered to be the ideal solution for transporting large items. Especially when these items are too large for the luggage compartment. It is very easy to secure the transverse roof rack to the roof rails – simply flip the eccentric lever down and you're done. It is **lockable**, thereby deterring any thieves. The T-slot allows other practical, reliable, lockable transportation systems such as bicycle racks, ski racks, ski and snowboard boxes, luggage baskets, etc., to be fitted to the roof rack. The roof rack is **subjected to rigorous testing** for water resistance, corrosion resistance and durability. It also undergoes the **City Crash Test** (test method for transportation systems) to ensure that it is both strong and durable. The transverse roof rack's load capacity is determined by the maximum permissible roof load for the vehicle (including roof rack), the details of which can be found in the registration document.

Associated products:

Spare set comprising plastic caps without a lock / 3T9 092 201
 Spare large plastic cap without a lock / 5E0 071 738
 Spare set with 4 locks and 2 keys / 3T9 071 220
 Lockable bicycle rack / 000 071 128E / 000 071 128D

Installation time: 20 TU

Set contents:

Front bar, rear bar, lock (x 2), fitting instructions.

Length:

Front – 1204 mm,
 rear – 1152 mm.

Load capacity:

The weight of the load to be transported (including the transverse roof rack) on the vehicle roof must not exceed 75 kg. In addition, the maximum permitted vehicle weight must not be exceeded.

Installation position:

Secured to the roof rails.

Maintenance:

Spray moving parts with oil once a year.

Guarantee: 24 months.

Weight: 4.1 kg
