

# Protective door sill covers

57A 071 303A

ŠKODA KAROQ (NU)

**Material:** ABS plastic / ALU

**Color:** Black / silver

## Attractiveness | Style | Protection | Quality

This **set of protective door sill covers** is designed to make your car even more attractive while preventing car occupants from damaging the door sill paint when climbing into the vehicle. Catching the eyes of anyone climbing into the car, this interior accessory will turn even an ordinary trip into an **exciting experience** for all car occupants, as it gives the car an **impressive and unique character**. The decorative KAROQ sign on the cover proudly refers to the product's exclusive allegiance to this model. Besides its elegant look that **no doubt enhances the overall interior experience**, you are guaranteed to appreciate its practical benefits. The door sill covers **protect the paint** on the front and rear door sills against impurities and mechanical damage from the shoes of persons getting in and out of the car. Stringent material-strain (lab) tests and long-term road tests have proven the **door sill covers' high resistance to mechanical strain in all kinds of weather**. The high resistance of the door sill covers is the result of using ABS plastics whose primary role is protective and a high-quality ALU insert that enhances the product's aesthetic value. The unique shape of the covers **perfectly copies that of the door sills**. If necessary, the door sills can be easily cleaned using ordinary detergents. These protective covers will help you prevent scratches on the door sills and underscore the attractive look of your car.

To install this product, the following items need to be ordered from the ŠKODA Genuine Accessories portfolio:  
Door sill cover fitting templates / 57A 071 718
