

Alloy wheel LEPUS

5E0 071 496F HA7

ŠKODA Octavia (5E)

Material: Light metal alloy

Colour: Anthracite metallic – front polished

Modern Design | Rigorous Tests | Robustness | Quality

The **Anthracite-metallic Lepus** wheels belong to a group of cast wheels of **ultra-modern design** that draws immediate **attention**. Apart from their distinctive appearance, they also positively influence the driving properties. They also contribute to a better sense of driving thanks to the reduction of unsprung weight. The Lepus wheels have passed **rigorous tests** according to strict standards of ŠKODA AUTO to test their resistance to corrosion, climatic influences and driving strain. They are made of an alloy of aluminium and a few other light metals. They are cast as a solid piece and coated with a layer of heat-resistant protective finish. The genuine workmanship is also defined by front polishing that creates an impression of two colours. The option of using these wheels for a specific car needs to be verified in its main registration card. Sediment dirt that latches on the alloy wheels is easily removed with cleaning agents, which are part of the offering of the ŠKODA Genuine Accessories portfolio.

Wheel dimensions: 6,5J x 16", ET 46

Tyres: 205/55 R16

Specified for combination with snow chains: No

Fitting time: 40 TU

Contents of the kit: Alloy wheel including the ŠKODA central cover, installation manual
