

## Rear mud flaps

**6V6 075 101**

ŠKODA Fabia (NJ3)

**Material:** EVA + polyethylene

**Colour:** Black

### Utility | Protection | Robustness | Quality

When driving a car, even small accessories can play a big role. A part of the ŠKODA Original Accessories assortment, the mud flaps for the ŠKODA Fabia model are a prime example of this. The mud flaps are used to **protect** the lower part of the car, bumpers and sills from dirt and stray rocks. Each ŠKODA model has its own design of mud flaps. Thanks to that, they do not influence the car's aerodynamic properties as they **attach onto the car perfectly**. The material is **stable in temperatures** from -50 °C to + 50 °C. They are **resistant** to chemical materials (such as spreading salts, oils or fuels) and UV radiation. Simply attached around fender shields, the mud flaps **don't require** any **intervention into the car's bodywork**.

**Fitting time:** 40 TU

**Contents of the set:** 2 rear mud flaps, attaching material, installation manual

**Fitting:** Attach the mud flaps in the fender shields using the provided attaching material

**Maintenance:** Maintenance-free – wash the car in a car wash or using soap-based cleaning agents

**Restrictions:** Cannot be used on Fabia Monte Carlo or Fabia GreenLine

**Warranty:** 24 months

**Weight:** 0.45 kg
